DELIVERIES BY FREIGHT

The railroads have been and will be worked to capacity for some time to come. We, therefore, recommend placing your order early to be assured of having the seed on hand when needed.

Truck Service. New Orleans enjoys splendid truck service in all directions. To many points shipments by truck are more convenient and will move faster than freight. Rates are about the same.

EXPRESS for RUSH SHIPMENTS

If at any time you require rapid service and want your seeds at once, specify Express. Many special low Express rates apply to many points. Ask your Express Agent how much it will cost. He will gladly tell you.

Satisfaction GUARANTEED OR YOUR MONEY REFUNDED

For 66 years Reuter has steadfastly adhered to the highest standards of quality. No effort or expense is spared to furnish our many customers with the best. Even with the highest quality seeds, bulbs and plants, success in gardening or farming depends largely upon cultivation, soil and weather conditions. Therefore, in common with the universal custom of the Seed Trade, Reuter Seed Company, Inc., will not be in any way responsible for the crop. Our seeds, plants and bulbs are guaranteed to be exactly as represented, and in condition to grow satisfactorily if planted and cared for properly. Any single item not found to be entirely satisfactory will be replaced absolutely free of charge, or we will refund you every cent you paid, including transportation charges both ways.

Reuter operates its own modern seed laboratory in charge of a graduate Seed Analyst, formerly with the United States Government. Every lot of seed is painstakingly analyzed for purity and carefully tested for germination. Tests are also conducted in our large greenhouses, and finally checked under our personal supervision at our experimental farm. All seed must measure up to Reuter's rigid specifications, otherwise it is not shipped to you.

LARGEST COMPLETE STOCKS

Reuter places at your disposal the largest, finest and most complete stock of vegetable, farm and flower seeds in the entire South. Our warehouses are filled to the roofs with thousands of bags of the choicest seeds, produced especially for us under contract with the foremost seed breeders and growers in all parts of the world. We attempt, as far as humanly possible, to carry in stock at all times a sufficient quantity of every single variety offered in this catalog, so that all of your orders will be filled promptly and completely. Reuter urges you to make this immense, carefully selected stock the one dependable source of your entire seed supply.

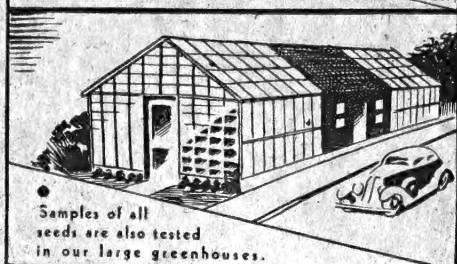

AIR-CONDITIONED STORAGE

We have installed in our own building the most modern, air-cooled, vermin-proof seed storage rooms. You will always find our seeds are of the highest germination, not only because every pound is fresh, new-crop stock, and not only because they are always painstakingly tested by a graduate Seed Analyst, but **germination and vitality are maintained** through these controlled temperatures and humidities in our seed storage rooms, which were designed for the sole purpose of storing our seeds under the most ideal conditions. Reuter has expended thousands of dollars in the latest equipment for this control of temperature and humidity to doubly assure you of receiving only seeds of strongest vitality and highest germination.

Place Your Order Early!

Transportation facilities are still overtaxed and may very well cause a delay in the arrival of your seed order. We, therefore, urge you as far as possible to anticipate your requirements. Send us your orders early allowing a reasonable time for filling and for any delay which may occur in transit. All possible advance preparations have been made for the Spring Season, and we want to assure you that we will do everything within our power to fill your orders completely, and quickly. Your co-operation will be very much appreciated.

NOTE: Prices in this catalog are subject to change, and we reserve the right to revise quotations at any time to conform with market changes and replacement costs. There will be no change, however, until conditions make it absolutely necessary.

HOW TO ORDER

You will find a convenient order blank in the front of Catalog. Write your name and address plainly. Be sure to state how you wish your order shipped.

Remit in any manner that suits your convenience. Send your personal check if it's easier. We will bear the cost of Post Office and Express Money Order, or cost of registering letters from places that are not money-order offices. Deduct from the amount of the order.

On orders where the amount is less than 50c, we will accept U. S. postage stamps in good condition (one, two or three-cent stamps preferred). Letters containing money should always be registered. Money in ordinary letters is unsafe.

No plants shipped C.O.D.

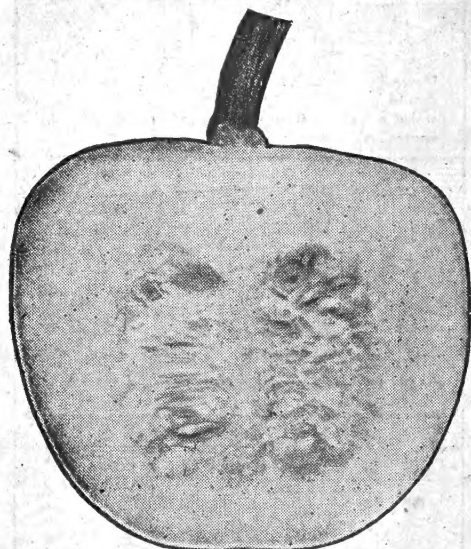

WE PAY POSTAGE

We pay the postage on everything offered in this Catalog up to and including 5 pounds on each variety, except where otherwise noted. This means that everything the home gardener requires is delivered to his door free of charge. Do not include postage on post-paid items.

SOUTHERN HYBRID CORNS

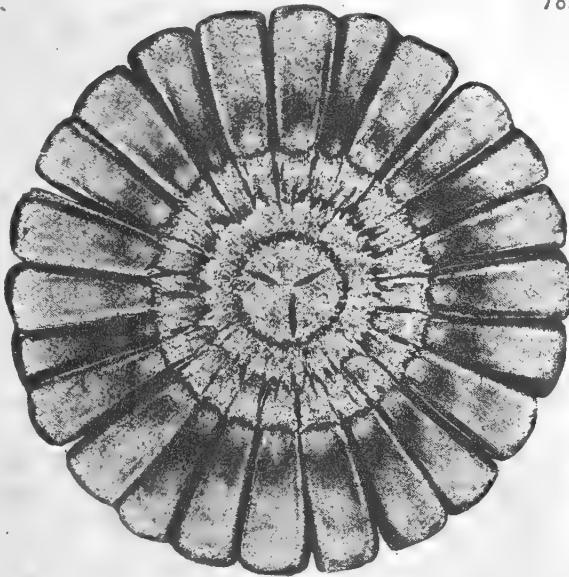

Increases yields 40%—Sound Ears—Deep Roots—Strong Stalks—Drought, Storm and Disease-Resistant—No Barren Stalks.

Reuter offers only Hybrid Corns bred and developed in the South and thoroughly adapted to severe Southern growing conditions and climate. Hybrids produced in the corn belt have repeatedly failed in the South for lack of shuck protection from insects.

The surest way to find the best Hybrid for your farm is to try a part of your crop in two varieties.

Hybrid seed reduces your production cost about one-fourth.

782 Hybrid Yellow Dent. 118 days. An exceptionally high yielding hybrid of wide adaptability. It's a tall grower with good roots and a heavy, stiff stalk making it very resistant to windstorms. A hybrid of promising quality and highly recommended for the deep South. Do not overlook to try some of this Hybrid Corn on your farm this year. **Lb. 35c; 2 lbs. 60c; 5 lbs. \$1.25.** Not prepaid: Pk. \$2.75; ½ bushel \$5.00; bushel \$9.50.

BEANS

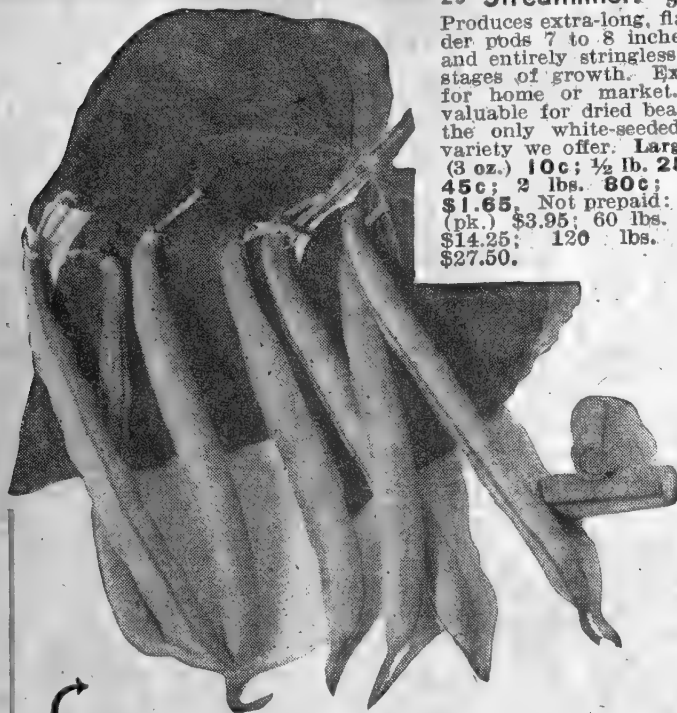

FOR HOME MARKET OR SHIPPING

How to Grow Beans. Plantings commence in the Lower South during January in our latitude, February and March. Sow $1\frac{1}{2}$ to 2 inches deep, 3 to 4 inches apart, in rows $2\frac{1}{2}$ to $3\frac{1}{2}$ feet apart. Cultivate often until plants blossom. Deep cultivation when in bloom will cause many flow-

ers to fall, and cultivating when vines are wet with dew may cause rust and spread anthracnose if it is present. Frequent picking insures a prolonged bearing season. Two pounds will sow 100 feet of row; 60 pounds (bushel), an acre.

Enjoy FRESH VEGETABLES Year round

CAULIFLOWER

Cauliflower is not difficult to grow. If your garden produces good cabbage, it should successfully grow Cauliflower. It is one of the garden's most delectable luxuries.

Culture. Requires rich soil and abundant moisture. The only significant difference in the culture of Cauliflower and that of cabbage is that with Cauliflower the heads must be protected from sunlight in order to insure the much desired white curd. This is most readily accomplished by gathering the leaves together loosely, as soon as the heads begin to form, and tying them at the top. One ounce will produce 2000 strong plants; ½ pound sufficient for an acre.

144 Early Snowball. 55 days from plants. Our cauliflower seed is grown for us by one of the foremost American specialists and for early maturing, we believe our strain is equal, if not superior, to any stock of Snowball being offered, regardless of price. The large heads are pure snow-white, solid, finely grained and very deep. It heads so evenly that the entire crop may be harvested within a short time after it begins to mature. The plants are quick-growing and vigorous, and the erect leaves are quite large and curl over the heads protecting them from the sun. The compact heads make a beautiful appearance on any market and always sell for the highest prices. Pkt. 20c; ¼ oz. 60c; ½ oz. \$1.10; oz. \$2.00; ¼ lb. \$7.00; lb. \$26.00.

Plant Collards and Swiss Chard for "Greens"

One ounce will sow 200 feet of row; 6 ounces, an acre.

More tender and better flavored than either. Does not winter-kill. Pkt. 5c; oz. 10c; ¼ lb. 20c; lb. 65c; 5 lbs. \$3.00. Not prepaid: 10 lbs. \$5.00; 25 lbs. \$11.25.

CANTALOUPEs-Muskmelons

How to Grow Cantaloupes

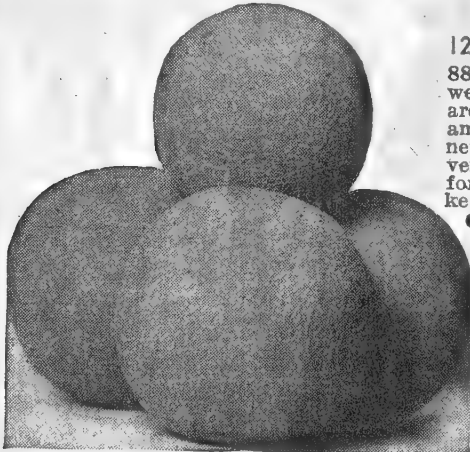

Prefer rich, sandy soil and plenty of sunshine. When the ground has become thoroughly warm, spade in well-rotted manure about $\frac{1}{2}$ foot deep, at the rate of a shovelful for each hill. Drop 8 to 10 seeds in slightly raised hills 4 to 6 feet apart each way, covering with $\frac{1}{2}$ to 1-inch of fine soil. When plants have produced their rough leaves, thin to the 3 or 4 strongest in each hill. Practice frequent shallow cultivation until vines cover ground. Commercial growers start the seed in hotbeds, in paper pots, or dirt-bands (write for prices) and later transplant to the field. Earlier plantings can be accomplished by the use of Hotkaps (see first pink page in rear of catalog). For fungous diseases in general, spray frequently with Bordeaux Mixture or Pyrox (see page 64); for "damping off," dust with flowers of sulphur when the vines are young; and maintain good drainage and clean cultivation.

One ounce will sow 50 hills; 2 to 3 pounds, an acre.

105 REUTER'S ORANGE FLESH

95 days. The "last word" in the Rocky Ford type. Its distinctive characteristic is its appealing deep orange flesh which is solid, fine-grained, juicy, deliciously sweet, and of a spicy flavor. size, shape, and maturity, nearly round, densely covered with a hard gray netting, and have practically no ribs. Recommended for its prolific bearing, unexcelled eating and shipping qualities. Pkt. 10c; oz. 20c; $\frac{1}{4}$ lb. 65c; lb. \$2.25; 5 lbs. \$10.25. Not prepaid: 10 lbs. \$19.50.

120 LARGE HACKENSACK.

88 days. An extra large Muskmelon weighing up to 7 pounds. The fruits are $6\frac{1}{2}$ inches long, 8 inches in diameter and densely ribbed with little netting. 108 IMPERIAL 45.92 days. An outstanding and unusual melon with a delightful flavor all its own. The peculiar golden color of its slightly netted skin gives one the impression of transparency. It is of the Rocky Ford size. The seed is held tightly in a very small and compact cavity. It's a heavy yielder even in the hottest, driest season and never shows spoilage in the field, even when quite ripe. A splendid long distance shipper. Pkt. 10c; oz. 20c; $\frac{1}{4}$ lb. 65c; lb. \$2.25; 5 lbs. \$10.25. Not prepaid: 10 lbs. \$19.50.

106 HONEY ROCK 95 days. The flesh is deep, thick, of orange color, with a sugary and luscious flavor all its own. Rind is so tough, and the flesh so firm that it can be allowed to ripen on the vine and then shipped long distances and yet arrive in perfect condition. The fruits are nearly round, medium in size, with a heavy, coarse netting over a slate-colored skin. The vigorous vines show no trace of blight. Pkt. 10c; oz. 20c; $\frac{1}{4}$ lb. 65c; lb. \$2.25; 5 lbs. \$10.25. Not prepaid: 10 lbs. \$19.50; 25 lbs. \$47.50.

Improved Perfecto CANTALOUPE

113 95 days. We predict this new variety will achieve great popularity. The medium-sized (6 by 5 inches), oval shaped fruits are finely netted, which in itself gives them a handsome appearance, but when they are halved and disclose their beautiful salmon-colored flesh, their appeal is irresistible. The flesh is thick, of a fine custard-like texture, and the triangular seed-cavity is the smallest found in melons of this type. Just about perfection for a true Cantaloupe. It is sure to supersede most of the older shipping varieties, now that we have this type selected to the typically Cantaloupe requirements. Pkt. 10c; oz. 20c; $\frac{1}{4}$ lb. 65c; lb. \$2.25; 5 lbs. \$10.25. Not prepaid: 10 lbs. \$19.50.

LETTUCE

With the discovery of its valuable health-giving vitamins, Lettuce has become a year-round table necessity. It is so easily grown that no garden need be without a generous supply.

Culture. Lettuce requires a rich soil, plenty of moisture, and a quick, steady growth from the time seeds are planted until the heads are ready for use. The most common causes of failure to get Lettuce to head properly are too late planting and not giving the plants sufficient room for developing. Lettuce seed is difficult to germinate in hot weather. We suggest the seed be first soaked in ice-water for an hour, then wrapped in dampened paper or cheese-cloth and placed in the refrigerator for 10 to 12 hours prior to planting. Spread seed out on dry paper in shade and dry slightly. Immediately broadcast on good moist seed-bed, or sow 8 to 10 inches apart in rows 15 to 18 inches apart, covering with less than $\frac{1}{2}$ inch of fine soil. One ounce will sow 150 feet of row; 2 to 3 pounds, an acre.

Plant Rutabagas
for Your Stock

American Purple-Top Rutabaga

PURE-BRED Tomatoes

Culture. For early fruit, sow thinly in a hotbed or indoors in shallow boxes. Harden plants by exposing to the air occasionally. In about 6 weeks the plants will be ready to set out, provided danger of frost is over. The rows should be 4 to 5 feet apart and the plants about 3 feet apart in the row, or 2 feet in row if staked. Cultivate as long as the vines will permit.

Maturity dates given are from the setting of plants to marketable fruits.

Tomatoes are much improved in appearance and quality when trained to stakes. The usual method is to set one strong plant to a 5- or 6-foot stake, tying the plant up and pruning it quite freely as the vine advances in growth. One ounce will produce 1500 plants; 4 to 6 ounces will furnish sufficient plants for an acre.

ROSES

Cultural Directions

For Growing Roses

Select a location where your Roses will get the sun at least 5 or 6 hours a day. They do best in a slightly acid ground, and if your soil is alkaline it is advisable to give the rose beds an application of aluminum sulphate before setting out the bushes. Broadcast this material over the surface at the rate of 10 pounds per 100 square feet, and mix it into the soil by spading. For easy cultivation and cutting of flowers do not make your rose beds more than 3 feet wide, and set your bushes 1½ feet apart each way.

About the end of February the Rose Bushes should be pruned. Cut the plants back to about 12 inches, remove all dead wood and weak and unproductive growth. Climbing Roses, if cut back at all, should be pruned about the beginning of July. Some growers object to severe pruning, in which case remove only the dead wood or unproductive growth.

Give your first application of plant food about the middle of February and continue monthly until June. Apply one closed handful to each bush sprinkled over the surface and watered down.

Spraying is very necessary to protect the plants from Black Spot, Mildew and Insects. Trigon or Nicotine Pyrox are probably the most efficient of all the spray materials as they control the fungus and kill all types of insects.

During hot weather a mulch of some kind is of great importance. Such material as Peat Moss or Servall is suitable for this purpose.

Every rose you get from us is hardy, vigorous, outdoor nursery-grown—ready to bloom. Every bush is labeled true to name.

Plants are shipped from January 25 until supply is exhausted. We recommend Winter planting, and advise placing your order early as stock is limited.

GRASSES

FOR LAWNS AND FARMS

Fancy BERMUDA Grass

829 The most dependable and permanent grass for lawns, golf-courses and athletic fields. Makes a tough, even, clumpless turf that recovers quickly after cutting. Lasts for years; stands a long, hot, dry summer without injury. It is by far the most important pasture grass in the South. Succeeds on nearly all types of soil, even if poor and sandy. Loamy bottom lands well drained are best. As a grazing and fattening grass has few equals. It is palatable and relished by all live-stock. Close grazing improves its quality. On good soil will furnish two or more cuttings and frequently up to 5 tons of hay per acre. Grows well with Lespedeza and Dallis Grass, and follows winter growing clovers, such as White Dutch, Bur, Medic, Hop and Persian exceptionally well. Germinates in 20 to 30 days with proper soil moisture. Sow broadcast and cover very lightly, when ground is thoroughly warm and only on well-prepared land. Sow 12 to 15 pounds to the acre for pasture; 5 lbs. to 1,000 square feet for lawns. The seed is very small and to facilitate equal distribution may be mixed with dry soil to increase bulk. The grass spreads rapidly over the ground by means of its aggressive root system.

The Bermuda Grass Seed we offer is the fine leaf cultivated turf-producing strain, testing 98% pure or better. Reuter always offers the best. **Lb. 75c; 5 lbs. \$3.50; 10 lbs. \$5.25; 100 lbs. \$48.00.** Not prepaid;

St. Augustine

A splendid perennial grass for shady lawns in the lower South. It is a deep green, broad-bladed grass, creeping by means of surface runners. Seed is not available, but lawns are established by rooted runners, laid down in parallel trenches about 8 to 10 inches apart. A bushel will plant from 150 to 200 square feet. Write for free leaflet. **Not prepaid: Bus. \$2.25; 10 bus. \$20.00.**

RED TOP

833 Good for lawns and pastures. Stands wet weather and overflowing for even two to three weeks. Will hold well during the summer until April at the rate of 5 pounds per 1,000 square feet for lawns and 10 to 15 pounds per acre for pastures. Cover seed very lightly. **Lb. 45c; 5 lbs. \$1.85; 10 lbs. \$2.50; 100 lbs. \$22.00.** Not prepaid;

RESCUE

842 (Bromus Schraderi). Makes fine early spring pasture. Grows in tufts or bunches, often a foot in diameter and is very leafy at the base. The stems are nearly erect. 2 to 4 feet high. Furnishes nutritious grazing until May. Does well mixed with Rye Grass and Bur Clover at the rate of 30 to 40 lbs. per acre. **Lb. 55c; 5 lbs. \$2.25; 10 lbs. \$3.20; 100 lbs. \$28.00.** Not prepaid;

Hulled BERMUDA Grass

826 Reuter offers his Extra Fancy Bermuda Grass with the hull removed, a new process which gives much quicker germination. Under favorable moisture and soil conditions, Reuter's Hulled Bermuda Grass will germinate in 7 to 10 days, whereas unhulled seed requires 20 to 30 days. In fact, it germinates almost as quickly as Rye Grass. It is the same grade as our famous Fancy Bermuda offered above with the almost water-tight hulls removed, previously believed impossible. Furthermore, it is more economical, because only about half the quantity is necessary to sow a 100 square feet of lawn.

It is revolutionizing Bermuda lawn planting with its quick, positive results.

Seed should be sown from March until November in the lower South and from May until September in the upper South. Plant 3 lbs. to each 1,000 (50x20) sq. ft. of lawn, fairway, athletic or aviation field. Use 10 lbs. per acre for pasture. Plant when ground is warm because Bermuda will not germinate in cold soil. Be sure to specify **HULLED SEED** when ordering otherwise the unhulled seed will be shipped.

Prices: **Lb. 95c; 5 lbs. \$4.50.** Not prepaid: 10 lbs. \$7.50; 100 lbs. \$70.00.

American RYE Grass

840 An annual, tall, broad, flat-leaved deep green grass very valuable for winter lawns and pastures. Produces within 3 weeks, or less, a beautiful green winter lawn. It is one of the most important and valuable winter pasture grasses for the entire South. Grows from 2 to 3 feet high. Withstands severe winters perfectly. On mellow soils no preparation is needed—simply sow seed and lightly cover. Requires 10 pounds per 1,000 square feet for lawns; 25 to 30 pounds per acre when used alone for pasture. Spring sowings are conducted during January and February. Reuter offers seed of the highest quality. **Lb. 25c; 5 lbs. \$1.00.** Not prepaid: 10 lbs. \$1.40; 100 lbs. \$12.00.

RHODES GRASS

844 A valuable pasture and hay grass for South Texas. Yields 6 to 8 cuttings of rich hay, each averaging 1 to 1½ tons per acre. Does not stand severe freezing. Thrives best on soils that are fairly moist. It is very leafy, slender and erect, producing stems from 2 to 5 feet in height. The hay is easily cured. Broadcast seed anytime during the early spring on well prepared land at the rate of 12 lbs. per acre. Cultural leaflet free! **Lb. 90c; 5 lbs. \$4.00.** Not prepaid: 10 lbs. \$6.40; 100 lbs. \$60.00.

BLUE Kentucky GRASS

836 Excellent lawn grass; ideal for golf fairways and putting-greens; the sweetest and best pasture grass. Plants slightly creeping with deep green narrow leaf blades. It is only adapted to parts of the upper South and Northward. 5 pounds will sow 1,000 square feet for lawns; 40 pounds per acre for pasture. Plant in the fall and early spring. **Lb. 75c; 5 lbs. \$3.50.** Not prepaid: 10 lbs. \$5.25; 100 lbs. \$48.00.

Greatest PASTURE GRASSES for the SOUTH

Carpet Grass

CARPET GRASS

830 Rapidly proving itself the most important and valuable permanent grazing grass for the South. A perennial spreading by creeping stems which root at every joint, thus forming a close, compact turf. Compared with Bermuda Grass, Carpet Grass is its equal in feeding value; it may be grazed considerably later in the fall and earlier in the spring; it does better on poor, sandy soils and furnishes more grazing; it is better adapted to wet sour soils and thrives better under hot, humid conditions. Like Bermuda, it is palatable and relished by all livestock.

It is strictly a pasture grass and stands close grazing and heavy trampling; in fact, it grows best and spreads more rapidly when closely grazed and trampling seems to improve it. Can be sown over your present pasture, creek bottoms, or cut-over woodland without plowing or discing. Produces practically year-round succulent green pasture, fully equal to Kentucky Blue Grass. Easily eradicated by plowing. It does splendidly sown with Lespedeza, Dallis Grass, Black Medic, White Clover and Bur Clover. Carpet Grass can be grown wherever the temperature does not fall below 10 degrees. Fall sowings are conducted during September, October and November, and spring from March until July. It is a drought-resisting grass and furnishes fine grazing during long dry spells, when all other grasses are dead. Carpet Grass is easy to start, if you plant first quality seed. Most of the seeds on the market are low grade. Reuter's stock is the finest available from the choicest meadows in the South. Sow at the rate of 10 to 15 lbs. per acre for pasture and 25 to 30 lbs. for lawns, public parks and golf courses. Lb. 40c; 5 lbs. \$1.75. Not prepaid: 10 lbs. \$2.50; 100 lbs. \$22.00.

BAHIA GRASS

835 An excellent pasture grass for the lower South. It ranks between Carpet and Bermuda Grass in palatability and nutritive value and is a wonderful turf former. Bahia is a deep rooted, perennial grass forming a dense turf of leaves. The plants spread slowly by short, stout stolens and ranges in height up to 30 inches. Once well established Bahia will stand temperature of 12 above zero. It is widely adopted, growing on both high and low soils and will grow on drier land than other pasture grasses because of its deep root system. Sow the seed $\frac{1}{2}$ to 1 inch deep at the rate of 10 to 20 pounds per acre. Seed often germinates slowly as they are surrounded by a waxy coat which does not readily allow water to enter for germination. Reuters offers high grade imported seeds only. Lb. 55c; 5 lbs. \$2.50. Not prepaid: 10 lbs. \$3.75; 100 lbs. \$33.00.

BAHIA GRASS

PANIC GRASS

845 Giant Blue Panicum is a new marvel among pasture grasses. It is rich in protein and food value and yields per acre more than double that of Alfalfa. Panic Grass is a perennial bunch grass. It doesn't make much growth for the first several months during which time it is building a root system. After it gets the roots well established it grows amazingly fast and is resistant to drouth. Seed should be planted in moist soil and covered lightly using only 1 pound per acre. It may be advisable to mix the fine seed with some dry sand in order to be able to sow the seeds evenly. Rolling after planting the seed will often improve the germination and give a better stand. Write for free leaflet. $\frac{1}{4}$ lb. 90c; lb. \$3.25; 5 lbs. \$15.00. Not prepaid: 10 lbs. \$27.00.

DALLIS

GRASS

834 (*Paspalum Dilatum*.) One of the most valuable permanent pasture grasses in the South. Comes nearer growing year-round than any other grass. Cultivation readily kills it. Makes its fastest growth on heavy or moist bottomland, but gives satisfactory results on dry hill lands, and will even grow in burnt-over timber land. It stops washes and gullies. Withstands continued drought remarkably well. We know of no better grass to withstand flood conditions on lowlands. Light freezes do not injure this grass. Due to its tuft formation and compactness of growth, it will choke out Johnson Grass and undesirable weeds.

Combines well with Bermuda and Carpet Grasses, and once started in mixtures keeps a satisfactory balance with other crops. Lespedeza grows well with Dallis Grass mix-

tures, also White Dutch, Alsike, Hop, Bur, Black Medic and Persian Clover. It will stand more drought than Bermuda. Plantings are made the year-round, but principally in late summer and early fall, and in the spring commencing in January. Broadcast 10 to 15 lbs. per acre if sown alone.

Reuter normally carries in stock both Louisiana-grown and imported seed. It is doubtful, however, whether imported stock will be available this season, but Louisiana-grown seeds are highly satisfactory and extensively used.

Louisiana-Grown: Lb. 65c; 5 lbs. \$2.85. Not prepaid: 10 lbs. \$4.50; 100 lbs. \$42.00.

Imported Seed. Not available this season.

SUDAN GRASSES

FOR PASTURE AND HAY

COMMON SUDAN

825 This valuable, quick-growing, heavy-producing grass should be grown on every farm in the South. Yields from 4 to 10 tons of cured hay per acre. Can be successfully grown on almost every class of soil, and makes its greatest growth and produces most feed during July, August, and September. The hay is relished by cattle, horses, and sheep. Feeding value is equal to that of millet, timothy, and other non-legume roughages. Stools out wonderfully after the first cutting. An excellent catch-crop, requiring only 45 days before the first cutting. The cost of seeding is low—only 10 to 25 pounds per acre. It stands more hot, dry weather than any other pasture, and can be cut as often as four times a season. Plant when ground becomes warm, either broadcast or in rows 2 feet apart, and cultivate like corn. Cut for hay when in bloom. May be grown with cowpeas and soy beans. Sow 5 to 6 pounds to the acre in rows; 20 to 25 pounds broadcast. Lb. 25c; 2 lbs. 45c; 5 lbs. \$1.00. Not prepaid: 10 lbs. \$1.25; 100 lbs. \$10.50; 1,000 lbs. \$87.50.

MILLETS

GOLDEN

853 Makes quick, easily cured, large-yielding, and nutritious hay-crop. Relished by horses and cattle. Ready in 6 to 8 weeks, and should be cut when coming into flower. Seed thickly, not less than 50 pounds to the acre, any time from April until the end of July. We offer genuine Tennessee-grown seed. Lb. 25c; 2 lbs. 45c; 5 lbs. 85c. Not prepaid: 10 lbs. \$1.10; 100 lbs. \$8.50.

PEARL CATTAIL

855 One of the most nutritious of the green forage plants. Grows 10 to 12 feet high, but cutting can commence when 3 to 4 feet high. Can be cut 3 or 4 times in a season. Does well on poor land. All stock eat it greedily and thrive on it. No plant will go further toward solving the forage problem in the South. Should not be planted until the ground is thoroughly warm. Plant until August in 3-foot rows, using 5 pounds of seed, or 20 pounds broadcast, to the acre. Lb. 30c; 2 lbs. 50c; 5 lbs. \$1.00. Not prepaid: 10 lbs. \$1.40; 100 lbs. \$11.50.

SWEET SUDAN

824 Developed by the Texas Agricultural Experiment Station in co-operation with the Bureau of Plant Industry, U. S. Department of Agriculture. It is sweet, juicy and more palatable to livestock than the common Sudan, and even after the crop reaches maturity the stalks and stems are relished by cattle. Sweet Sudan has more and broader leaves, heavier and taller stalks and stools much heavier than the Common variety. Its resistance to leaf-disease and its non-shattering seed qualities makes it far superior to the old type. Somewhat later than the common varieties, but furnishes much more grazing. Lb. 40c; 2 lbs. 70c; 5 lbs. \$1.50. Not prepaid: 10 lbs. \$1.90; 100 lbs. \$16.50.

JOHNSON GRASS

827 Recognized as one of our most valuable hay and forage plants, although considered a pest in many parts of the South. No other grass makes such enormous yields of hay—3 to 4 cuttings a season—and the hay compares favorably with timothy and alfalfa. It should be cut or mowed just when the seed-heads begin to form. There is always a great demand for Johnson Grass hay, as it is relished by all stock, especially horses. In places, where it can be controlled there is no other perennial grass that makes as good yields of hay. Resists drought remarkably well. Sow 40 pounds to the acre from early spring until early fall to give you a permanent summer pasture and a hay-crop forever. Mixtures of Johnson Grass and other crops, such as oats and cowpeas, also make a good quality of hay. Lb. 40c; 2 lbs. 75c; 5 lbs. \$1.60. Not prepaid: 10 lbs. \$2.30; 100 lbs. \$20.00.

TEOSINTE

913 A giant forage plant. The yield is truly enormous and 50 tons of green forage per acre is not unusual. Grows 8 to 12 ft. high, sending up from 20 to 50 stalks from a single root. If harvested when 4 to 5 ft. high, 2 or 3 cuttings may be obtained in a single season. Plant during April and May in drills 3½ to 4 feet apart; 2 to 3 pounds plants an acre. Oz. packet 10c; ¼ lb. 35c; lb. \$1.10; 2 lbs. \$2.00; 5 lbs. \$4.50. For larger quantities see price list in back of catalog.

BENE

914 One of the finest crops for poultry feed and highly recommended for planting to attract quail and partridges. It's a hardy, tall, annual herb growing 4 to 7 ft. high, producing flowers followed by seed pods which scatter oily seeds in great profusion. Frequently planted to bait dove fields. Plant in rows out in the woods and also in cotton and cornfields at the last cultivation at the rate of 5 lbs. per acre. We offer the tall growing variety. ¼ lb. 20c; lb. 60c; 2 lbs. \$1.15; 5 lbs. \$2.50. Not prepaid: 10 lbs. \$3.75.

The pearly white, sound grains are long, set close to a small white cob, very uniform in shape, and well filled. Grows 10 to 12 feet high, has good roots, and will withstand storms better than most varieties. 749-A Genuine Oklahoma Silver Mine. (90 days.) Matures green corn 10 days later than our Iowa-grown stock. A very heavy yielder of exceedingly large, heavy ears, requiring less ears to fill a crate as compared to the Iowa Silver Mine, as well as other roasting ear varieties. The cobs are covered with 14 to 18 rows, and average from 9 to 12 inches in length. A splendid yielder, very resistant to worm damage, and an outstanding type to plant for market and shipping. Also, a splendid field corn, combining earliness with extra large, well-filled ears. Makes excellent meal. One to two large ears are formed to the stalk, and the hardness of this type with its perfectly formed ears make this an exceptionally valuable corn for "roasting" ears or for stock feeding when left to mature. $\frac{1}{4}$ lb. 10c; lb. 25c; 2 lbs. 45c; 5 lbs. 90c. Not prepaid: Pk. \$1.35; bus. \$4.50; 2 bus. or more, \$4.25 per bus.

It is a strong grower, resisting heavy windstorms without blowing down. In good soil each stalk bears 2 to 3 medium-sized ears. It yields good crops on light soils and is one of the most productive and profitable white varieties in the South. $\frac{1}{4}$ lb. 10c; lb. 25c; 2 lbs. 45c; 5 lbs. 90c. Not prepaid: Pk. \$1.40; bus. \$4.75; 2 bus. or more, \$4.50 per bus.

758 Mexican June.

Matures in 120 days; roasting ears in 80 days. Usually planted during May, June, and July. It is largely used in the Southwest for planting after oats and wheat. Ears are 8 to 9 inches long; grains short to medium; cobs medium in size, and while usually white, red cobs are sometimes found. Ears are mostly white-grained, but dark blue and red grains appear. Resists drought and heat, and makes a splendid yield with a moderate amount of moisture. The stalks are usually short, although early planting makes stalks 12 to 15 feet high and leaves 4 to 6 feet long. Makes fine roasting-ears for use right up to frost. $\frac{1}{4}$ lb. 10c; lb. 25c; 2 lbs. 45c; 5 lbs. 90c. Not prepaid: Pk. \$1.35; bus. \$4.60; 2 bus. or more, \$4.35 per bus.

TUXPAN for Lower South

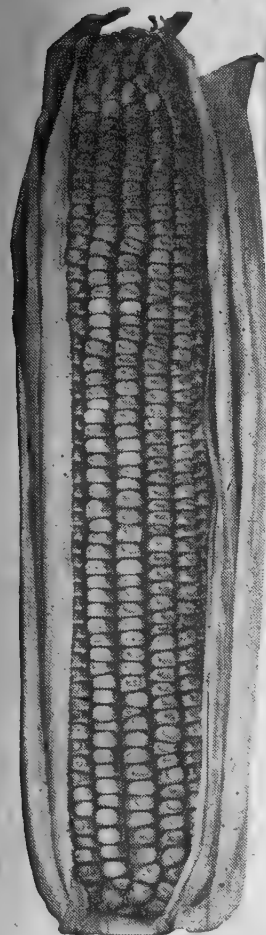

757 Matures in 140 days; roasting ears in 85 days. A late, tall-growing variety, originally from Mexico, especially well adapted to the Gulf Coastal Plains and Southern Florida. Its long, tight shucks make it very resistant to damage by corn ear worms and weevils, and it is probably the best of all varieties in this respect. Stalks grow from 10 to 12 feet tall. Ears are very long, large and heavy, with 14 to 16 rows of kernels. Grain is white and hard, but not flinty. Cobs are small and the shelling percentage is high. Its immense stalks make good fodder. Very popular in Louisiana. It is a medium late, large growing, single ear variety. The ears are large and cylindrical, average about 8 to 10 inches in length. The kernels are large, being thick, wide and long, and of a beautiful deep yellow color. The percentage of grain is high, running about 85%. The husk protection is exceptionally good, making it a weevil-resistant variety. The 5-year average yield is nearly 40 bushels per acre. Matures in about 120 days. $\frac{1}{4}$ lb. 10c; lb. 25c; 2 lbs. 45c; 5 lbs. 90c. Not prepaid: Pk. \$1.35; bus. \$4.60; 2 bus. or more, \$4.35 per bus.

761 Jarvis Golden Prolific.

One of the finest early yellow Corns for the South, averaging two ears to the stalk, 14 to 18 rows of good-sized, deep, rich golden yellow grains on firm, solid, uniform ears that are 8 inches in length. It is a heavy yielder and the nearest approach to a genuine yellow prolific Corn. The white cobs are small, giving a good shell-out; the strong stalks are straight and of medium size, 7 to 8 feet tall, the ears half-way up held erect on a medium shank. Matures dry Corn in 115 days or less. We consider it the highest yielding yellow Corn for the South and it is highly recommended because it is a natural drought-resister, the grain is hard, sound, and flinty, the husk is close and completely covers the ears, and makes it the most solid of any yellow Corn we know. Crops have been left in the field until early spring and they come out good, sound Corn. $\frac{1}{4}$ lb. 10c; lb. 25c; 2 lbs. 45c; 5 lbs. 90c. Not prepaid: Pk. \$1.35; bus. \$4.60; 2 bus. or more, \$4.35 per bus.

750 Ohio Champion.

Best white Corn, usually maturing roasting-ears in 70 to 75 days. Every stalk bears a good, sound ear 9 to 10 inches long. Heavy yielding, considering its earliness; the grains are medium large, deep, and closely placed on a small cob. A favorite with truckers who grow "Green Corn" for early market. $\frac{1}{4}$ lb. 10c; lb. 30c; 2 lbs. 50c; 5 lbs. \$1.00. Not prepaid: Pk. \$1.25; bus. \$4.25; 2 bus. or more, \$4.00 per bus.

Originator's Pure-Bred COTTON SEED

**D. AND P. L. (Deltapine 14)
FOUNDATION PLANTING COTTON SEED**

TRADE MARK
Reg. U. S. Patent Office

DELTAPINE 14

We are now offering Breeder's Registered Deltapine 14 planting seed with the assurance that this is the most productive and thoroughly satisfactory variety yet introduced. It has proved more productive with a somewhat longer staple and a larger boll than has either Deltapine 12 or Deltapine 11-A, to which it is related and similar.

The spinning quality of this cotton has been tested by the United States Department of Agriculture and the results were released in a report of May, 1941, and reads as follows: "Deltapine 14. Very low percentage of manufacturing waste and strong yarns of good appearance combine to make this an outstanding variety in the test. This sample was found superior to strain 12 in almost every respect."

Deltapine 14 has been tested thoroughly at Scott during the four years, 1938-41, and it has outyielded all other varieties that have been tested for that period. In the four years Deltapine 14 has been compared with Deltapine 12 in separate variety and strain tests. In all but one of these ten tests Deltapine 14 outyielded Deltapine 12, with an average increase of 4.8%. The average length of staple was 35/32nds for Deltapine 14 against 34.3/32nds for Deltapine 12 as classed by the Staple Cotton Cooperative Association.

The stock we offer has been treated with Ceresan to produce better stands of more vigorous plants.

Reuter offers genuine originator's seed in branded, sealed bags.

CERTIFIED DELTAPINE 14

Due to unfavorable growing conditions the originator's seed crop of Foundation planting stock has failed this year. We have been, however, fortunate in obtaining an excellent lot of **Certified Deltapine 14 Cotton Seed** which we can highly recommend in its place. Cotton Seed "runs out" quickly, so Reuter urges you to plant the best and most improved strain each year for a greater yield.

The Certified Seed we offer is delinted Ceresan treated and of high germination.

Certified seed in branded, sealed bags. Not prepaid: 30 lbs. (bus.) \$2.60; 100 lbs. (3 1/3 bus.) \$7.50; 300 lbs. (10 bus.) \$21.75.

If you plant your own Cotton Seed treat it with 2% Ceresan. Will increase yield. 1 lb. treats 5 to 8 bushels. Lb. 75c; 4 1/4 lbs. \$3.14; 25 lbs., \$14.50, postpaid.

HOP CLOVER

744 Grows well over the greater part of all the Southern States. It's very aggressive and hardy. Should be a part of all pasture Clover mixtures. It is one of the earliest to give grazing. Specially adapted to sandy soil and waste lands. When planted on rich soil, it will produce larger plants with more foliage. If used alone, sow 6 pounds per acre. Plant in early fall and spring. Makes slow growth through the winter, but comes on rapidly in the early spring. Seed should be inoculated. Seed Very scarce. Lb. 75c; 5 lbs. \$3.50. Not prepaid: 10 lbs. \$5.25; 100 lbs. \$50.00.

BLACK MEDIC

742 A wonderful Clover of the alfalfa family, thriving on all soils except loose sands and waterlogged types. It spreads faster than any other Clover. Reseeds itself with the closest possible grazing. Yields a very nutritious pasture. Sow from early September until March, the earlier the better. It can also be used to excellent advantage for cover crop purposes. Matures seed in May. It works well in mixtures with other clovers and grasses for grazing. Sow 10-15 pounds an acre. Inoculate seed. Lb. 60c; 5 lbs. \$2.75. Not prepaid: 10 lbs. \$4.20; 100 lbs. \$40.00.

Alyce Clover

THE GREATEST SUMMER CLOVER FOR THE SOUTH

A FIELD OF ALYCE CLOVER

PERSIAN CLOVER

743 A marvelous new clover for every pasture in the South. Will carry 4 to 6 head of cattle per acre throughout the entire growing season. Yields 2 to 3 tons of rich palatable hay per acre. Grows 2 to 3 feet high, bearing small pink flowers. Persian Clover grows well in mixtures and is often planted with White Dutch, Bermuda and Dallis Grass. It grows equally well on clay or loamy soil. Sow 6 to 8 pounds per acre in fall or early spring and cover lightly. Furnishes splendid grazing from early spring until June. Inoculate seed with Nitragin. Sorry, sold out.

SWEET CLOVERS

735 (Melilotus alba). A biennial Sweet Clover. Grows two years from one seeding. Makes a large growth the first year, but a much heavier growth the second due to its extensive root system. It's a great soil builder. Relished by all kinds of livestock. No other pasture crop measures up to the summer and fall grazing furnished by this plant. Should be in all pasture mixtures. Here in the South two cuttings of hay are had the first year, and one cutting and a seed crop the second or grazing entirely, if preferable. Plant during spring and early fall at the rate of 15 to 20 pounds per acre, if sown alone. Seed should be inoculated for best results with NITRAGIN. Lb. 45c; 5 lbs. \$1.75. Not prepaid: 10 lbs. \$2.10; 100 lbs. \$19.00.

MELILOTUS INDICA

738 Annual Yellow Blossom Sweet Clover. Also spoken of as "Sour Clover." A valuable winter legume for the lower South. Grows 2 to 3 feet tall and produces 5 to 10 tons of green matter by early May. Will reseed itself if cut when seeds start maturing. It thrives on all kinds of soil and grows rapidly and abundantly. Sow during the early fall or spring at the rate of 20 pounds per acre if used alone. Inoculate seed for best results with NITRAGIN. SOLD OUT.

ALYCE CLOVER

727 This revolutionizing new clover should be on every farm in the South. Like Lespedeza it is a summer annual reseeding each fall and volunteering the next summer, but grows twice as tall and furnishes much more hay or pasture of finer quality feeding value and palatability. When cut early for hay a second growth will produce a seed crop, 350 to 600 pounds per acre. Cut hay in early bloom and rake as soon as drying permits. It dries readily and can be baled the day following harvesting. Grows well in shade of wooded pastures or orchards. Has more root nodules than Crotalaria and is 50% better for soil improvement. Does well in acid soil if not too wet. Resistant to insects, diseases, heat and drought. Makes 2-4 tons hay per acre. Seeded on Bermuda, Dallis, Carpet or other grass sods it furnishes nitrogen that is lacking in Southern soils, and doubles the growth of grass. It has 4 times more calcium, twice as much phosphorus and 2½ times as much protein as Carpet Grass. When cows graze on it their milk flow increases. Plant during spring and early summer at the rate of 10-12 lbs. per acre broadcast. Inoculate seed with Nitragin E. Write for free cultural leaflet. Lb. 55c; 5 lbs. \$2.35. Not prepaid: 10 lbs. \$3.70; 100 lbs. \$35.00.

White Dutch CLOVER

734 White Dutch Clover is the only plant that furnishes abundant grazing throughout the year under severe Southern conditions. The hottest dry summers do not stop its steady and sure growth. It has no equal for winter and early spring grazing. It is not easy to tramp out, and it restricts soil-washing and adds fertility. It is relished by all livestock. It is adapted in the South to practically every region and type of soil. It is a perennial. White Dutch Clover does well with Bermuda and Dallis Grass, as well as with Kentucky Blue Grass and Red Top in the upper South.

Sow during the fall and early spring at the rate of 10 lbs. per acre when planted alone. On established pastures, from 4 to 6 lbs. of seed per acre will give a good stand. Seed should be inoculated with NITRAGIN. ¼ lb. 40c; lb. \$1.25; 5 lbs. \$6.00. Not prepaid: 10 lbs. \$10.00; 100 lbs. \$95.00.

743A Marvelous Mixture. A combination of three of our most famous pasture clovers for the South—Persian, White Dutch and yellow Hop. A seeding that will last for years. Produces fine quality and variety of most excellent feed and gives longer pasture season. It only requires 6 pounds of seed to the acre. Sorry. Sold Out.

ALSIKE CLOVER

736 On the borders of marshes, seepy hillsides, and places too wet for other Clovers this plant makes its best growth. It is of no value on dry soils. Sow with Red-Top grass. Sow during fall and spring, at the rate of 6 to 8 pounds per acre. Inoculate seed with NITRAGIN. Lb. 65c; 5 lbs. \$2.75. Not prepaid: 10 lbs. \$4.40; 100 lbs. \$41.70.

RED CLOVER

737 Better known in the Northern part of the Cotton Belt, but thrives very well in the lower regions. Recommended chiefly as a winter and spring pasture Clover and soil improver on meadows. Some use it for hay, and yields 1 to 2 cuttings. Most soils, except strongly acid types, suit this great soil-improving clover. Commence sowing during the early fall and spring at the rate of 12 to 15 lbs. per acre. When planted in pasture mixtures with other crops, 5 lbs. per acre is sufficient. Inoculate seed with NITRAGIN. Prices: Lb. 65c; 5 lbs. \$2.75. Not prepaid: 10 lbs. \$4.70; 100 lbs. \$44.70.

LESPEDeza

The Wonder Crop

Unequaled for hay, pasture and soil-building. Adapted to a wider area than any other known legume. Withstands droughts that would kill other crops. Increases the grazing capacity of pastures from twenty-five to fifty percent. Grows anywhere—on acid soils, waste lands, worn-out gravelly soils and galled hillsides, where nothing else of value will grow. Reseeds itself every year, even when severely grazed, but is easily killed out by a cultivated crop. Does well in mixtures in all Southern pasture grasses.

Sericea Lespedeza

731 (Perennial). Thrives on poor land and acid or sour land, as well as rich soil. Its root system reaches 1 to 3 feet in the soil for nourishment, and even in the driest weather will continue to grow and flourish. Makes slow growth on poor soil the first year, but when once established, it produces an abundance of nutritious forage that is relished by all livestock. The second-year growth each plant puts out 20 to 30 stalks from 5 to 6 feet tall, producing a better quality hay in succeeding years and gives three cuttings per season. Produces as high as 3 to 4 tons of dry hay equal to alfalfa in feeding value. The roots survive the coldest winters. May be closely grazed. A heavy yielder of seed. Reuter offers you only re-cleaned, hulled and scarified seed. If a seed crop is wanted, sow 4 to 5 pounds per acre in 3-ft. rows on well-prepared seed bed from February until July, the earlier the better. For hay broadcast 15 to 20 pounds per acre. Cover seed very lightly. Cultural leaflet free. Seed should be inoculated. See above. **Lb. 55c; 5 lbs. \$2.50.** For larger quantities, see price-list in back of catalog.

Inoculate All Lespedeza with Nitragin "L"

For a better stand and maximum yield, inoculate your seeds with Nitragin before planting. The procedure is simple and inexpensive. Full directions on each can. **100 lb. size can 50c postpaid.**

Korean

Common

KOBE

732 The earliest of the annual Lespedezas. The abundant growth, deep penetrating roots covered with nodules makes Korean Lespedeza an outstanding grazing and soil-building legume. It makes larger growth than the Common, 15 to 24 inches, single plants having a spread of 3 feet; has larger leaves, furnishes pasturage three weeks earlier. It is highly recommended for the upper South where the seasons are shorter and the sun less severe. In permanent pasture mixtures, the seed may be planted with other grasses and clovers in the spring, using from 5 to 10 pounds of seed per acre. When sown alone broadcast 25 lbs. to the acre. February and March are the best months to plant. **Lb. 30c; 5 lbs. \$1.25.** For larger quantities, see price-list in back of catalog.

733 Does well over a wider territory than other varieties. The most important pasture legume in the South. Increases carrying capacity of pasture lands from 25 to 50%. On good soil will produce an excellent growth, and reaches a height of from 18 to 30 inches. The small stems of the plant make it an easily cured hay crop. Seed should be planted in February or March. On grazing crops sow 10 to 15 pounds per acre, alone for hay crop 25 pounds. **Lb. 55c; 5 lbs. \$2.50.** For larger quantities, see price-list in back of catalog.

730 Thrives over the entire South. It is of spreading growth, but stands up well when the stand is thick. It is more drought-resistant than the Common, being deeper rooted. Recommended for the main cotton belt, or from southern Arkansas, Tennessee and coastal North Carolina south. Outyields the Common for hay and pasture in this territory. If used for hay and sown alone, sow 30 to 35 pounds of seed. On permanent pasture lands sow 10 to 12 pounds to acre. **Lb. 45c; 5 lbs. \$2.00.** For larger quantities, see price-list in back of catalog.

ARIZONA GROWN

HAIRY PERUVIAN

702 Superior to all types where the temperature does not fall below 10 degrees Fahrenheit. Yields 10 to 20 per cent more growth during the winter and can be cut through the entire year for hay. It is a tall, vigorous grower, and will live as long as any type where there is summer moisture. Yields one more cutting and from one to three tons more hay in a season than other Alfalfa. On poor or sandy land, will give you cuttings of hay where other kinds will not. Sow during spring in prepared, well-drained soil, broadcast or in drills, at the rate of 15 to 20 pounds per acre. Seed should be inoculated. **Lb. 65c; 5 lbs. \$3.00.** Not prepaid: 10 lbs. \$4.70; 100 lbs. \$45.00. Write for quantity prices when ready to buy.

ALFALFA

PEERLESS

701 The highest grade Arizona-grown Alfalfa seed. It is perfectly adapted to almost the entire upper South. Reuter's customers are enthusiastic about it. They tell us that it will yield more than Utah and Kansas seed. Peerless Brand will have the hardiness and yielding quality you demand in Alfalfa. Where it is planted on good, well-drained soil, with some lime, and cultivated with a spring tooth harrow, it will last almost indefinitely and cold does not kill it after it becomes well established. This is genuine Chilean or Common Alfalfa. None better. Seed should be inoculated. **Lb. 65c; 5 lbs. \$3.00.** Not prepaid: 10 lbs. \$4.70; 100 lbs. \$45.00. Write for current quantity prices when ready to buy.

GREAT SOIL BUILDING CROPS

Crotalaria

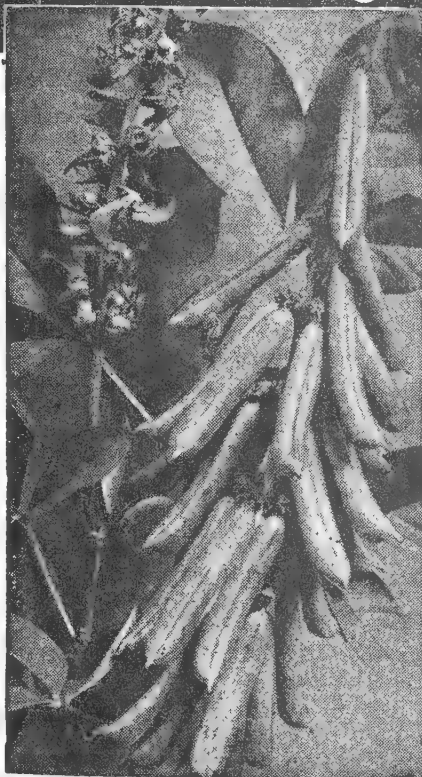

OUR CROTALARIA SEED IS SCARIFIED

Reuter's Crotalaria seed is hand-picked, machine cleaned and cured in the most approved manner. Our reputation stands back of every bag we sell. The seed has a purity of 98% or more and germination of 90% or better. In recent test plantings, properly cured and scarified seed produced eight times as many plants per square yard as compared to ordinary field-run, non-scarified seed.

885-A Spectabilis, Early Strain.

A new early strain in every way equal to the common variety, but matures three weeks earlier and more dwarf in growth. Makes nearly as heavy a tonnage. Can be sown from March until July. More desirable for planting in fruit and pecan orchards and will mature seed and can be plowed under before the nuts fall. Customers in upper South should plant this type. **Lb. 40c; 5 lbs. \$1.60.** For larger quantities, see price-list in back of catalog.

885-C Alabama Improved. This is the Alabama Improved No. 5 strain and is superior to the Common Early described above. **Lb. 40c; 5 lbs. \$1.60.** For larger quantities, see price-list in back of catalog.

885 Spectabilis, Late. A remarkable new summer cover crop and soil builder yielding 40,000 pounds of green weight per acre. The humus produced by such yield is of tremendous value. When turned under is the equivalent of 800 pounds of Nitrate of Soda. It is not recommended for hay. Requires no fertilization, no lining, no inoculation. Re-seeds itself under favorable conditions. Broadcast just before the last cultivation of cotton or corn. It will just about double the crop yields following it. Thrives on any soil. Broadcast 10 to 15 pounds on well-prepared land from March through June, harrowing in not over 2 inches, while the soil is moist. **Lb. 40c; 5 lbs. \$1.60.** For larger quantities, see price-list in back of catalog.

885-B Intermedia. The only Crotalaria that is relished by live-stock. Furnishes several cuttings of hay. The long, thin leaves are of fine quality. It's two weeks earlier than the Spectabilis. Grows much the same as the other two types described above. It is adapted to sandy loam soils, but does well on high ground. It requires about 3 to 5 pounds to sow an acre planted in rows 3 to 3½ feet apart, 8 to 10 pounds broadcasted. Seed should be planted 1½ to 2 inches deep as soon as danger of frost is past. Cultivate the same as corn. Makes a splendid cover crop to plow under. **Lb. 45c; 5 lbs. \$2.00.** For larger quantities, see price-list in back of catalog.

SESBANIA

884 Macrocarpa.

A great summer growing fertilizer crop. Loosens and emulsifies the soil. Citrus growers in the Imperial and Rio Grande Valley have found it superior to all other fertilizer crops, making more tonnage, quicker growth and shading the young trees during hot weather. Florida citrus growers are commencing to plant it liberally. Trucker growers are planting it in a bigger way. It requires from 8 to 10 weeks from time of germination to time of plowing under. It should be plowed under when the seed is in the dough. Attains a height of from 8 to 10 feet. Individual plants will make a limb spread of from 4 to 6 feet. The foliage is like an acacia, with finely cut small leaves. They decay very rapidly. The root growth is very rapid, as much as 3 feet from tip to tip, and 18 inches deep in eight weeks. They are entirely covered with nodules. It has no known value other than as a fertilizer crop, or for game preserves. Quail are very fond of the seed, which are produced in abundance, and are capable of lying on the ground a long while, and remaining in good condition. Citrus growers usually drill 30 lbs. of seed to the acre, between the trees. Trucker growers should sow 40 lbs. per acre and give a light covering. Cotton and corn farmers have found Sesbania the solution of keeping up their soils, sowing at the rate of 12 to 20 lbs. per acre. For the period of growth, we know of no legume which is equal as a producer of nitrogen and humus. Cultivation readily kills it. Plant only scarified seed that germinates readily. **Lb. 40c; 5 lbs. \$1.60.** Not prepaid: 10 lbs. \$2.00; 100 lbs. \$18.00.

MUNG BEANS

710 The roots are crowded with nitrogen gathering nodules and it is truly a great crop to turn under for building up your soil. For hay, plants grow erect and bushy not lodging except on rich bottom land. Grows 3 to 5 feet high, easily cut and cured—stock eat it clean with less waste than peavine hay. Yields run from 500 to 1,000 pounds per acre. Mung Beans do well on sandy to heavy clay soil that will grow any kind of grain crop. Plant 3 to 5 pounds per acre in 3½-foot rows. Broadcast 10 to 15 pounds per acre. Matures in 90 to 120 days. **¼ lb. 15c; 1 lb. 45c; 2 lbs. 80c; 5 lbs. \$1.75.** Not prepaid: 10 lbs. \$2.30; 100 lbs. \$20.00.

BROOM CORN

723 Scarbrough Dwarf. This type has less seed on it, and is on the upper one-third of the brush, allowing cleaner threshing. Make the finest parlor brooms. Plant 4 to 6 seeds in hills 30 to 36 inches apart, rows 40 inches apart. Requires 4 to 5 lbs. to plant an acre. **¼ lb. 15c; 1 lb. 50c; 5 lbs. \$2.00.**
723A Standard Evergreen. Grows 7 to 12 feet tall, and the brushes are usually from 12 to 24 inches long. The brush should be harvested when the natural green color extends from the top of the fiber to the base of the head. **¼ lb. 15c; 1 lb. 50c; 5 lbs. \$2.00.** For larger quantities, see price-list in back of catalog.

**GROW

OWN
FEED**

CANE SEED

These Sorghums can be planted either alone or mixed with cowpeas and soy beans. Plant in 3½- to 4-foot drills, using 8 to 10 pounds per acre, or broadcast 50 to 75 pounds for forage. If sown broadcast with peas, use 25 pounds with 1 bushel of peas. Our seed is remarkably clean and of exceptional quality.

901 Improved Black Amber. Far superior in growth and yielding qualities to the original early Amber Sorghum. Not good for syrup, but fine for early green feed and silage. If planted early it will yield two cuttings a season. If grown with cowpeas or soy beans the quality of the hay is improved and a more balanced ration may be had. Grows 10 to 12 feet. **Lb. 30c; 2 lbs. 55c; 5 lbs. \$1.10.** For larger quantities, see price-list in back of catalog.

899 Early Orange. Stalks taller and heavier than the Amber, but matures later. Yields immense crops for fodder. **Lb. 30c; 2 lbs. 55c; 5 lbs. \$1.10.** For larger quantities, see price-list in back of catalog.

902 Red-Top or Sumac. The great hay-cane or sweet Sorghum crop for the Southwest. Its slender stalks and abundant leaves make it desirable for hay. Resists drought. **Lb. 30c; 2 lbs. 55c; 5 lbs. \$1.10.** For larger quantities, see price-list in back of catalog.

Reuter's SORGHUM FOR SYRUP

897 Sugar Drip Sorghum. Highly prized syrup-cane. Grows 9 to 10 feet high and has a very large percent of saccharine in the stalk. Under normal conditions yields 200 gallons of syrup of excellent flavor and beautiful amber color per acre. **Lb. 35c; 2 lbs. 60c; 5 lbs. \$1.25.** For larger quantities see price-list in back of catalog.

FETERITA

894 (Spur.) A distinct dwarf variety. Matures earlier and produces heavier yields than Kafir corn or Milo. Valuable for forage and fodder. It is a good crop to plant after oats or wheat because it is quick-maturing and its grain-feed value is nearly as high as corn. For hog-feed, cut grain-heads in the "dough." Soil should be prepared early for planting Feterita. Sow in 3-foot rows, 6 to 8 pounds per acre. **Lb. 25c; 2 lbs. 40c;** back of catalog.

YELLOW MILO-MAlZE

896 Fine grain-crop or substitute for corn. Grows 4 feet high and has large grain-heads. It is quick to mature and may be planted late in the season as a "catch-crop." The compact stalk makes harvesting much easier. Resistant to drought. Plant in 3-foot rows at the rate of 6 to 8 pounds to the acre. **Lb. 25c; 2 lbs. 40c; 5 lbs. 85c.** For larger quantities, see price-list in back of catalog.

Martin's COMBINE MILO

900 An improved strain of Milo Maize averaging 36 inches in height with the uniform heads carried upright on sturdy stalks which make harvesting with a combine easy and practical. Well adapted to light or poor soil. Plant in 3 foot rows at the rate of 6 to 8 pounds per acre. **Lb. 25c; 2 lbs. 45c; 5 lbs. 90c.** For large quantities see price-list in back of catalog.

HEGARI

904 Yields 10 to 12

tons of green forage per acre. Leaves are broad, long and numerous. The uniform and upright seed heads of white grains do not shatter. The fodder is relished by all livestock because the stalks are very sweet and juicy. Grows 4 to 5 feet high. Matures in 85 to 110 days. Close spacing of 2 to 4 inches apart in the row is recommended for forage. Sow 8 to 10 lbs. per acre. Also sown broadcast for hay at the rate of 40 to 50 lbs. per acre. Stands dry weather well. **Lb. 25c; 2 lbs. 40c; 5 lbs. 75c.** For larger quantities, see price-list in back of catalog.

905 Certified Hegari. **Lb. 25c; 2 lbs. 45c; 5 lbs. 90c.** For larger quantities see price-list in back of catalog.

SAGRAIN

903 Produces 8 to 15 tons of silage or if left to ripen will produce 40 to 50 bushels of grain and 4 to 8 tons of cured hay per acre. Relished by all livestock. Grows quickly—matures in 10 to 12 weeks. A safer feed crop than corn and withstands neglect and adverse conditions. Splendid combination with Soy Beans.

Plant in 3½ ft. rows, 8 to 10 seeds per hill every 12 inches. Cultivate a couple of times and thin out 4 to 5 stalks per hill. We do not recommend broadcast planting. Can be best harvested with a corn binder, shocked like oats until cured. Plant 10 lbs. per acre. **Lb. 30c; 2 lbs. 50c; 5 lbs. \$1.00.** For larger quantities see price-list in back of catalog.

Chicken CORN

895 (Egyptian Wheat.) Grows tall and produces 3 to 6 stalks from a single root. When grown for grain, the tops are cut, cured, and threshed like other grains. The grain is of high feeding value. Sow 8 to 10 pounds in drills 3 feet apart, or broadcast 25 pounds per acre. Matures in 120 to 140 days. It is the cheapest and best chicken-feed. **Pkt. 10c; lb. 35c; 2 lbs. 60c; 5 lbs. \$1.25.** For larger quantities, see price list in back of catalog.

WHITE KAFIR CORN

891 (Black Hull.) Very stocky and leafy; valuable for forage and grain. Drill seed thinly, like sorghum, or sow broadcast. **Lb. 25c; 2 lbs. 40c; 5 lbs. 75c.** For larger quantities, see price-list in back of catalog.

Plant PLENTY of FEED CROPS

Grow Peanuts

Peanuts are a profitable "cash" crop. Easily grown on any soil. In addition to the nuts, the hay is superior to alfalfa as it contains more fats and is equal in protein. An excellent soil-improver. Shell the seed before planting, but where there is sufficient moisture this practice is not necessary. If planted in corn, 30 pounds will plant 4 acres; planted alone, 30 to 40 pounds in 2½- to 3-foot rows, dropping seed in hills 8 to 10 inches apart. Cover 1 to 2 inches deep. Cultivate thoroughly until nuts begin to form.

865 Spanish. An early, heavy bearer; bushes grow close; are easily cultivated and gathered. Nuts are small and sweet. Lb. 30c; 2 lbs. 55c; 5 lbs. \$1.10. Not prepaid: 10 lbs. \$1.60; 100 lbs. \$14.00.

866 Valencia. Finest large variety. Pods contain 3 or 4 red-skinned nuts of handsome appearance. The flavor is mild and sweet. Lb. 40c; 2 lbs. 70c; 5 lbs. \$1.50. Not prepaid: 10 lbs. \$2.10; 100 lbs. \$19.00.

867 Runner. Excellent for forage. Grown for hog-feed, the nuts will remain in ground in good condition until eaten out. Lb. 30c; 2 lbs. 55c; 5 lbs. \$1.10. Not prepaid: 10 lbs. \$1.60; 100 lbs. \$14.00.

DWARF ESSEX RAPE

876 Relished by all kinds of stock, but principally planted for hogs and poultry. Tops look like rutabagas, but larger; make fine "greens" for table as a substitute for turnip or spinach "greens," when young.

Grows 15 to 30 inches high and makes a crop in 6 to 8 weeks. Sow any time during the spring, summer, and fall, either in drills (4 pounds per acre) or broadcast (8 pounds per acre). Planted in small grain, will pasture 20 hogs for 3 months. Keeps stock in fine condition. You should plant Rape for your hogs and poultry. Pkt. 10c; lb. 40c; 2 lbs. 75c; 5 lbs. \$1.60.

Not prepaid: 10 lbs. \$2.35; 100 lbs. \$21.00.

GREAT HOG CROPS

CHUFAS

815 The Chufa is a species of ground-nut, most easily grown. Any land suitable for corn, cotton, or peanuts will make a bumper crop of Chufas. Plant from April until the end of June, in 2½- to 3-foot rows, dropping 3 to 5 Chufas together, 16 to 18 inches apart in the row, and cover 2 inches deep. In the fall pull up a few plants for your stock to taste, and they will then go over the entire field and will attend to the harvesting. Requires 1 to 1½ pecks to plant an acre. The crop is usually matured about September 15, and can be left in the ground until time to turn the hogs in. ¼ lb. 15c; lb. 35c; 2 lbs. 65c; 5 lbs. \$1.40. Not prepaid: 10 lbs. \$1.95; 100 lbs. \$17.00.

ARTICHOKE

816 Jerusalem or Ground. Every hog-raiser should grow Artichokes, for they come year after year, and keep the hogs in fine condition. You grow them just as you would potatoes: Cut them two eyes to the piece and plant 2 inches deep, 15 to 18 inches apart in 3- to 3½-foot rows. In the fall when they have matured, turn the hogs into the field, and they will feed on them all winter except when the ground is wet or frozen. They are more productive than potatoes. Yields of 700 bushels have been grown on an acre of good land, but 300 to 400 bushels is nearer the average crop. Although grown principally for hogs, they are fine food for cattle, sheep and horses. Also make an excellent table dish when served hot or chilled. Requires about 250 pounds to plant an acre. Plant during March or April, the earlier the better; they stand considerable drought and extreme cold weather. Lb. 30c; 2 lbs. 50c; 5 lbs. \$1.00. Write for larger quantity prices.

UPLAND RICE

881 Any ground having a reasonable amount of moisture can produce a good crop of Upland Rice. Drill 25 lbs. per acre in rows 2½ feet apart and cultivate. Will make 20 to 40 bushels per acre. Should be planted in March or April for best results. Lb. 25c; 2 lbs. 45c; 5 lbs. 85c. Not prepaid: 10 lbs. \$1.00; 100 lbs. \$7.50.

JAPANESE BUCKWHEAT

728 Splendid soil-improver, good summer cover-crop for orchards, and an excellent late summer catch-crop. A great poultry-feed, and bees fed on buckwheat blooms produce more honey. Buckwheat flour makes the most delicious cakes. Sow 40 to 50 lbs. to acre, either broadcast or in drills. Lb. 20c; 2 lbs. 35c; 5 lbs. 75c. Not prepaid: 10 lbs. 95c; 100 lbs. \$7.50.

MAMMOTH RUSSIAN SUNFLOWER

912 Easily grown, an immense yielder, and as an egg-producing poultry-feed it has no equal. The leaves make good fodder; the whole plant makes fine ensilage and hog-feed. Plant from March to September at the rate of 6 to 8 pounds to the acre, in rows 3 feet apart and hills 1 foot apart in the row; when 4 to 6 inches tall, thin to one stalk to the hill. Pkt. 10c; lb. 35c; 2 lbs. 65c; 5 lbs. \$1.35. Not prepaid: 10 lbs. \$2.10; 100 lbs. \$18.00.

SOY BEANS

**WONDERFUL
FOR HAY and SOIL BUILDING**

PALMETTO

719 (Matures in 165 days.) It produces an excellent quality of hay; the leaves and stems are of medium size. On less fertile soil, the plants grow erect, while the branches have twining terminals. The height of the plant or length of vine is approximately 6 feet. The Palmetto has produced three tons in tests at Baton Rouge. The seed is straw yellow with black hilum, and of medium size. **Lb. 25c; 2 lbs. 40c; 5 lbs. 90c.** Write for larger quantity prices.

MAMLOXI

704 (Matures in 130 days.) A Mammoth Yellow and Biloxi, developed by the Delta Experiment Station. It's the highest producing of all strains tested at the station, having produced above 50 bushels per acre. It is much better than Biloxi for hay, grazing, planting in corn and soil building. Shatters less than any other variety. Mamloxi is the best edible Soy Bean yet developed, and should be considered in our food production program. Sow 2 bushels per acre broadcast to produce more hay and better quality than any other upright bean. **Lb. 25c; 2 lbs. 40c; 5 lbs. 85c.** Write for larger quantity prices.

O-TOO-TANS

709 (Matures in 170 days.) The most popular main-crop hay and soil-improving Soy Bean. Compared with cowpeas, one-fourth the amount of seed will produce double the amount of hay. Compared to velvet beans, it makes a better cover-crop, does not overrun trees or fences, and can be cut for hay if wanted. There is no legume that will put as much humus and nitrogen combined into the soil. Produces 4 to 6 tons of dry hay, or 10 to 15 tons of green forage per acre, and surpasses alfalfa in feed-value. When grown for seed, you can expect 15 to 20 bushels per acre. Grows over a long period and is seldom affected by wet or dry weather. Less liable to shatter than other sorts. It cures quickly, and for hay and grain combined it has no equal. Plant in rows $2\frac{1}{2}$ to 3 feet apart, 4 to 8 inches apart in drill. A bushel will plant 3 to 4 acres solid, or from 6 to 8 acres in corn middles. **Lb. 30c; 2 lbs. 55c; 5 lbs. \$1.15.** Write for larger quantity prices.

LAREDOS

711 (Matures in 140 days.) The plant's many slender, leafy branches make it unexcelled as a high-quality hay. In a six-year test it averaged $1\frac{1}{2}$ to 2 tons to the acre. Yields 15 to 20 bushels of seed per acre. It is early enough to be harvested in warm weather—usually the latter part of September—and late enough to be productive. In our latitude can be planted up to August 1. Distinctly a hay and land-improving Bean. Immune to root-knot. One bushel plants 6 to 8 acres. **Lb. 30c; 2 lbs. 55c; 5 lbs. \$1.15.** Write for larger quantity prices.

PELICAN

705 (Matures in 145 days.) An excellent early maturing, new, yellow Soy Bean, developed by Louisiana State Department of Agriculture. It is a very strong grower with a heavy crop of foliage, making it particularly valuable as a cover crop. It is a free seeder and produces from 20 to 30 bushels of seed per acre. The seed does not scatter as readily as other varieties of Soy Beans. Pelican is the first yellow seeded Soy Bean that compares favorably with the popular Avoyelles and will, no doubt, replace same in many sections when it becomes better known. One bushel will plant 3 to $3\frac{1}{2}$ acres if sown in rows 3 feet apart. **Lb. 30c; 2 lbs. 50c; 5 lbs. \$1.00.** Write for larger quantity prices.

BILOXI SOY BEANS

708 (Matures in 165 days.) A rank-growing late variety. It takes longer than some to mature its grain but makes a whale of a plant. Planted in rows with corn for silage it usually grows 6 feet high. For grazing, for hogging down with corn, and for soiling, it is unexcelled. It is an erect, upstanding plant having no runners. This means something to the orchardist who wants a cover-crop to cover the ground only. Makes good hay if planted late in 3-foot rows, and thick enough in the drill to subdue its natural growth. It's a great hog and cattle Bean. Best results when planted in rows from 3 to 5 feet wide. Yields from 10 to 15 tons of green forage per acre. Will stand a lot of wet and a lot of drought. Does well on stiff, heavy soils, and on the light sandy soils. One bushel plants $1\frac{1}{2}$ to 2 acres. **Lb. 30c; 2 lbs. 50c; 5 lbs. \$1.00.** Write for larger quantity prices.

MAMMOTH Yellow

707 (Matures in 145 days.) Extensively grown for Beans and forage. It grows more than 3 feet high, is erect, and can be cut with a mower. A good hay Bean, and a splendid seed yielder used by many farmers for an early hog and cattle crop. You can expect 20 to 30 bushels of seed per acre and $1\frac{1}{2}$ to 2 tons of hay. Drill in rows 3 feet wide, using $\frac{1}{2}$ bushel of seed per acre, or broadcast a bushel to the acre. **Lb. 25c; 2 lbs. 40c; 5 lbs. 85c.** Write for larger quantity prices.

AVOYELLES

706 Matures in 170 days. A new type that is widely and successfully grown in Louisiana. The leaves and stems are large and coarse and the plant is a semi-viny, bushy type. The seeds are dull black and slightly larger than the O-too-tans. It produced 25 to 30 bushels of seed per acre. Yields over 3 tons of cured hay per acre. Louisiana planters prefer it to the O-too-tans because the Soy Bean caterpillars show a preference for O-too-tans when both are grown in the same field. One bushel plants $2\frac{1}{2}$ to 3 acres in rows $2\frac{1}{2}$ to 3 feet apart, 4 to 8 inches apart in drill. **Lb. 30c; 2 lbs. 50c; 5 lbs. \$1.00.** Write for larger quantity prices.

Inoculate all Soy Beans with NITRAGIN "S."

Recleaned COWPEAS

Cowpeas are the South's greatest soil-improving and hay-crop. Pound for pound, Cowpea hay is as valuable as clover hay. Nearly equals in value alfalfa and wheat-bran. Contains four times as much digestible protein as timothy hay. Makes a fine feed for work- and beef-stock and dairy cattle. Adds nitrogen to the soil and improves its

mechanical condition. There is no cheaper way to improve land than by growing Cowpeas.

Cowpeas can be planted any time from April until August, broadcast or in drills 3 to 4 feet apart. Cultivate two or three times. Broadcast, 1 to 2 bushels are required per acre, and 2 to 3 pecks for seeding in drills. Inoculate your seed for best results. See Index page.

VELVET BEANS

Make an enormous growth and as a soil-improver they are considered superior to cowpeas. The seed should not be planted until the ground has become warm. Plant a peck to a half bushel per acre, in rows 5 feet apart and 2½ to 3 feet apart in the row. Also grown with corn. Plant the corn in 5-foot rows and 3 feet apart in the row. The Beans are planted between the hills, and at the last working they are planted between the rows. Frequently stock is turned into the field and no attempt made to harvest the corn, or sometimes the ears are pulled from the stalks before the animals are turned in to graze. Inoculate your seed for best results. See Index page.

90 Days Early Speckle

713 This is the most valuable and popular variety. It is very prolific and can be planted later than other sorts on account of its early maturity. Makes a wonderful growth of vines for pasturing, and is a fine soil-improver. For the good of the land, grow Velvet Beans, and for the good of the cow, grow Velvet Beans. Two pounds of Velvet Beans in the pod will be found equal for milk production to one pound of cotton-seed meal. $\frac{1}{4}$ lb. 10c; lb. 30c; 2 lbs. 50c; 5 lbs. \$1.00. For larger quantities, see price-list in back of catalog.
